

NovAtel Supplies Reference Receivers for IRNSS Ground Segment

NovAtel, Canada, a leading manufacturer of Global Navigation Satellite System (GNSS) precise positioning technology, has announced an agreement with the Indian Space Research Organisation (ISRO) to supply reference receiver products for use in the Indian Regional Navigation Satellite System (IRNSS) ground segment.

India-based Elcome Technologies, a sister company to NovAtel in the Hexagon Group of companies, will provide local integration, training and technical support services for the NovAtel receivers. These receivers are based on NovAtel's G-III reference receiver platform, the same platform used for the Third Generation WAAS Reference Receiver (WAAS G-III), which will monitor the GPS (Global Positioning System) signals for the FAA's modernised Wide Area Augmentation System (WAAS) network.
