

# Orbit Announces Mobile Mapping Application

Orbit GT has announced the availability of its mobile mapping application Orbit AIM3 version 10.4. The update is immediately available for download. This upgrade is notable since it marks the integration of Orbitâ€™s 3D virtual world viewer within its mobile mapping portfolio.

Peter Bonne, VP business development and senior product manager at ORBIT GT, said this is a major step ahead for all those trying to get the most out of mobile mapping. Real-time browsing and measuring in huge point cloud databases is a major achievement in the Lidar world, he added.

Bonne stated Orbit GT is pleased to present the X.4 upgrade to its mobile mapping solution, 'Orbit AIM'. Orbit AIM3, or Asset Inventory Management for Mobile Mapping, is a well-known application for mobile mapping content management, feature extraction and content publishing worldwide. Registered MSC users can upgrade for free.
