

# Orbit GT Mobile Mapping Supports earthmine

Orbit GeoSpatial Technologies has realised support for earthmine™s panoramic imagery in its Asset Inventory Management software portfolio for Mobile Mapping. The high-quality panoramic imagery produced by the earthmine mobile mapping system can now be fully exploited within Orbit™s portfolio, including display, overlay, measure, inventory management, publishing, GIS and CAD integrations and more.

Peter Bonne, VP Business Development of Orbit GT, said that the goal to support all mobile mapping systems hereby takes another big step forwards, opening access to earthmine data for all customers, and bringing the Orbit tools to all earthmine users.

"earthmine is excited to expand the possibilities for delivering 3D street level imagery with Orbit," says Anthony Fassero, co-CEO of earthmine inc. "Orbit's AIM3 integration provides our partners with even more options to deliver fully integrated GIS solutions to end users." Orbit GT will be showcasing next week at the earthmine seminars hosted by Slagboom & Peeters in The Netherlands.
