

Penmap is About Sharing

Besides its new, complete data collection solutions such as the new GNSS and robotic systems, Penmap's main focus at this edition of Intergeo is 'Sharing'. With its new Cloud service, Penmap wants to bring data exchange between field and office and the whole data processing workflow to a new level.

The integration of the AutoCAD WS service into Penmap makes creating the final DWG drawing and delivery to customers a breeze. Simply clicking a button on Penmap in the field enables the survey to be shared instantly with the office team or customers. They can use virtually any platform (iPhone, iPad, Mac, AutoCAD or web browser) to review, edit, comment and print the survey. This service is offered at no cost, requiring no specific 'access' software or subscription.

Penmap also announces a major upgrade of version 8.0 which comes with more improvements in the user interface and a completely re-written powerful Total-station interface.

Penmap is in Hall 7A on Stand F61.
