

# Pictometry and AAMHatch Agreement

Pictometry International Corp. (NY, USA) has signed an exclusive business agreement with AAMHatch of Australia. Under terms of the agreement, AAMHatch has the exclusive rights to utilize Pictometry's patented imaging capture technology to take digital, georeferenced (location-enabled) aerial oblique imagery of Australia and New Zealand and to market the Pictometry image libraries and software in these areas.

Further, the agreement covers future options for Southeast Asia and southern Africa territories. Imaging of the Australian continent is currently underway.

[AAMHatch](#) operates a fleet of aircraft throughout the Asia Pacific region fitted with advanced remote sensing equipment including digital aerial cameras, lidar, video and thermal sensors. AAMHatch offices and over 150 staff located throughout Australia and Southeast Asia provide ground survey, project management, and logistics support for AAMHatch's diverse client base.

Pictometry's patented aerial imaging technology captures and catalogues image libraries of entire cities, counties, and states. The company's industry-leading software allows users to access up to 20 oblique (3D-like) aerial photos of every square foot in an area, including every building, highway, or other feature. The software also enables users to instantly obtain measurements such as distance, height, and area directly from the Intelligent Images as well as overlay GIS data and create fully textured, Pictometry Real3D models.
