

Proteus Strengthens Professional Satellite Imagery Procurement Service

Proteus, a provider of satellite derived mapping, bathymetry and geospatial products, has strengthened its professional satellite imagery procurement service by signing up as a reseller with international satellite imagery provider Airbus Defence and Space. Proteus is now an official reseller of Airbus's satellite imagery data and value-added products.

David Critchley, Proteus CEO, said they are currently providing clients with a successful satellite imagery procurement service. Adding the large product portfolio of Airbus Defence and Space to the current catalogue of data provides their customers with even more choice of high-quality product and satellite tasking services.

Proteus has been delivering geospatial solutions for mapping and classification projects using multispectral satellite imagery since 2011 and the experienced staff have all been working in the geospatial industry for over 15 years. Proteus's satellite imagery projects have been delivered for environmental consultancies, oil & gas, engineering and other coastal zone applications in Europe, USA, the Middle East and Caribbean.
