

SimActive for Keystone Aerial Surveys

Keystone Aerial Surveys, USA, has purchased SimActive's Correlator3D product for deriving accurate digital elevation models (DEM). Keystone required robust photogrammetry software able to handle large, state-wide and multiple-county projects. SimActive's Correlator3D fulfilled these requirements, offering ease-of-use combined with high-precision and matchless productivity.

Dr. Philippe Simard, president of SimActive, said that Correlator3D is expected to vastly improve production by accelerating project schedules through GPU-enabled autocorrelation and powerful DEM editing tools.
