

SuperGeo Malaysia Finds Sub-dealers

SuperGeo Malaysia recently recruited two sub-dealers, MYSPATIAL Sdn. Bhd. and Satscanner Sdn. Bhd., to enhance the local development of SuperGIS software in Malaysia. The two Malaysian companies hope to enhance the current product lines by the inclusion of SuperGIS software. With experience of GIS market, MYSPATIAL and Satscanner both have confidence in the functionality and pricing of SuperGIS products. They have approached SuperGeo Malaysia and have already been authorised to resell SuperGIS software in the local market.

MYSPATIAL Sdn. Bhd. focuses on geographic information system (GIS) and remote sensing (RS) technologies. Its applications include mapping and the analysis in the domains of agriculture, land management, infrastructure, forestry, etc.

Satscanner Sdn. Bhd, on the other hand, applies satellite and GIS technologies to the development, survey, planning, and mapping business of palm oil industry. It also offers professional satellite image processing service for the local users.

SuperGeo Malaysia is the subsidiary company co-built by SuperGeo Technologies and its original exclusive partner, Axis Commerce. Having penetrated the local GIS market successfully by winning GIS projects and selling SuperGIS software, SuperGeo Malaysia now expects to recruit more sub-dealers in dissimilar locations and various professional domains, to further expand the market development of SuperGIS software.
