

V International Congress GEOMATICA 2006

The V International Congress GEOMATICA 2006, Which will be held within the framework of INFORMATICA Convention, will focus in how Geomatics contributes for the development. Geographic dimensions of e-Government, disaster management, human development, among other national priorities will be tackled. Other applications of Geoinformation in interest of enterprise sectors will also be discussed.

Themes:

- education and training
- digital cartography
- location based services
- remote sensing and photogrammetry
- geographical information systems and geospatial portals
- geospatial data infrastructures
- navigation systems
- geospatial web services
- geospatial free software
- geospatial data mining and data warehouse
- geospatial challenges for the society: e-government, land management, disaster management, sustainable development, healthcare, environment, forestry, utilities, etc.

The congress will be held in Spanish and English.
