

# Acute3D Signs Partnership with Techni Drone

Acute3D is has agreed on a partnership with Techni Drone, a French company which trains people to become UAS remote pilots. With this partnership, Techni Drone and Acute3D aim to meet the needs of professional markets which require accurate 3D models for inspection applications. To reach this goal, both companies want to raise awareness among UAS operators about the importance of good imagery acquisition.

A new training programme will be offered from December by Techni Drone with courses dealing with photo acquisition and automatic 3D mapping from photos.

Smart3DCapture Advanced, the automatic 3D mapping software developed by Acute3D and dedicated to UAS operators for inspection, survey, etc., is put at the disposal of the trainees for the automatic 3D mapping part. Thanks to this new programme, Techni Drone's trainees will be now qualified not only in UAS piloting but also in photogrammetry.

By the end of 2014, more than 180 pilots will have received training by Techni Drone. Thanks to 15 years of experience in aeronautics training, the company has built up the most recognised UAV training centre in France since February 2013.

Its knowledge of the UAVs and its field experience allow it to propose air services to companies which need aerial footage, whether for artistic or technical purposes. Tech Drone is building an environment of partners to offer its clients complete services from footage to image reconstruction or editing.
