

GeoEye to be Integrated with Fugro World

GeoEye, USA, has entered into an agreement with Fugro for online imagery dissemination through Fugro World, Fugro's global portal for delivery of data and solutions. GeoEye's EyeQ platform will be integrated with Fugro World to support online access to satellite imagery.

Paolo Colombi, GeoEye's vice president for International Sales, believes that this agreement will allow GeoEye to welcome new EyeQ and imagery end-users in new markets and regions. Through Fugro World, clients can seamlessly discover, order and obtain data from multiple sources and suppliers in a single website.

Fugro chose GeoEye's EyeQ platform for its ability to provide online access to premium high-resolution satellite imagery content from an extensive global catalogue, as well as new collections using the GeoEye-1/IKONOS constellation. EyeQ offers fully managed service in the cloud, a scalable infrastructure and the availability of open and secure standard web services.
