

GeoForm 2014 Focuses on Geodesy, Cartography and GIS

The organisers of GeoForm are inviting geomatics professionals to attend the international exhibition on geodesy, cartography and GIS. The event will take place on 14-16 October 2014 in Moscow, Russia. GeoForm+ is the main exhibition held in the central region of Russia in the field of geodesy, cartography and geographic information systems. It is considered as an ideal venue for product promotion, conclusion of contracts and a meeting place for experts from various regions of Russia and other countries.

Among the exhibition sections are technologies and equipment for geodesy, geology and geophysics, areas research & modelling, cartography, remote sensing, geoinformation systems, satellite navigation and transport monitoring.

Leading manufacturers and distributors within the industry, such as Geostroyiziskaniya, Scanex, Sovzond, Geosignal, Fort XXI, Datum Group, Geometer-center, Prime Group and others will be showcasing their products. Exhibitors will present all aspects of equipment and services relating to geodesy and cartography, territorial planning and inventory, GIS and ERS, geodetic surveys, new technology of geophysics, design tools and UAVs.

The organising committee invites experts on geodesy, cartography and GIS as well as construction professionals and design, engineering and transport companies to visit the GeoForm exhibition.

Online registration is open and e-tickets are available now at www.geoexpo.ru.
