

# Hexagon Safety & Infrastructure Acquires GISquadrat

Hexagon Safety & Infrastructure has acquired GISquadrat GmbH of Vienna, Austria. The acquisition is aimed to enhance Hexagon's geospatial, cloud and mobile solutions for governments and utility providers in Europe.

A Hexagon partner prior to the acquisition, [GISquadrat](#) uses Hexagon software in a cloud environment to provide data capture and management services and applications, including task-specific field solutions for infrastructure networks and public services. GISquadrat's Data-as-a-Service (DaaS) solutions provide lower total cost of ownership for business-critical data. The company serves more than 300 customers and thousands of users.

Maximillian Weber, senior vice president of EMEA, [Hexagon Safety & Infrastructure](#) commented they are focused on delivering task-specific cloud and mobile solutions that increase the availability and value of enterprise information and the efficiency of workflows. The acquisition of GISquadrat expands the offerings for governments and utility providers of all sizes.

## Cadastral workflows

GISquadrat's solutions include applications for utility networks and cadastral workflows built on Hexagon software. They also include professional services that support spatial data collection, management and production. Following the acquisition, the company and its employees will continue current operations.

Hexagon Safety & Infrastructure has supported governments and utility providers through location-based technologies and task-specific business systems and applications for already more than 40 years. Its [public sector solutions](#) are developed to streamline complex processes, accelerate information flows, facilitate collaboration and deliver greater insight to decision makers.
