100 Partners Test Oracle Database 10g Release 2

Oracle (CA, USA) has announced the vast involvement of Independent Software Vendors (ISVs), System Integrators (SIs) and hardware vendors in its beta program to thoroughly develop and test joint solutions based on Oracle Database 10g Release 2. More than 100 companies are working closely with Oracle to help ensure Oracle Database 10g Release 2 meets the wide-ranging business needs of its customers.

Oracle Database 10g Release 2 features increased availability, manageability, performance and security capabilities to assist customers and partners achieve a higher quality of service while helping to reduce the cost and complexity of information management. Beta program participants previewed enhancements to Oracle Automatic Storage Management and Oracle Real Application Clusters, as well as new features such as Oracle Secure Backup and Oracle XML Query.
