

# 1Spatial Reseller for Tele Atlas

1Spatial (United Kingdom) has signed a Value Added Reseller agreement with Tele Atlas. 1Spatial can now offer powerful integration and quality services that include MultiNet data, to a broad range of organisations ranging from large corporate enterprises and System Integrators to local and central governments.

1Spatial has extensive experience in providing operational solutions to organisations with large geospatial databases, notably around geospatial data integration and quality control. 1Spatial will now be able to offer end-users a suite of GPS and geospatial solutions based on MultiNet helping them to more rapidly benefit from their location-based applications.

Both companies have already worked together to re-engineer the existing workflow for a large telecommunications company to replace the data from its incumbent digital mapping provider with the latest MultiNet database from Tele Atlas. For any telecommunications company available bandwidth, pricing, quality of service and, therefore, customer satisfaction rely on location intelligence.
