

# 3D Laser Mapping Appoints Mining Manager

3D Laser Mapping has appointed Francois Stroh to the position of global mining product manager. Stroh, an engineering surveyor with more than ten years experience of laser scanning sales, installation, training and support, will have responsibility for 3D Laser Mappings global mining division. Stroh will be based in South Africa close to the company's existing client base and will oversee the continued growth of laser scanning hardware and software, including 3D Laser Mapping's mine monitoring solution SiteMonitor.

Stroh qualified as a surveyor in the early nineties achieving a National Diploma in Civil Surveying from the Pretoria University of Technology, a qualification he later built on with a bridge course to a Bachelor of Technology Degree. He started his professional surveying

career with the South African Navy before going on to work with a number of commercial surveying companies including Murray and Roberts, Underwater Surveys and Tritan Survey of Cape Town.

In 1999 Stroh began his commercial association with laser scanning working for a succession of manufacturer distributors before, most recently, being appointed as HDS Product Specialist for Hexagon, a global technology company and parent company of Leica Geosystems.
