

3D Laser Mapping Expands in SA

3D Laser Mapping, UK, has appointed Adriaan Oeschger to the position of Key Account Manager. Oeschger's surveying background dates back more than twenty years working in the mining industry and most recently for a distributor of survey, measurement and geospatial solutions in South Africa. He will join the existing team, providing support and development for key accounts across the region.

Oeschger was employed for almost fifteen years by Lonmin Platinum, the third largest and lowest cost producer of platinum, at their Karee mine. He trained and specialised in both underground and surface surveying, as well as the plotting of measurements and observations in CAD environments. Oeschger joins 3D Laser Mapping from Geosystems Africa, the local distributor for Leica-Geosystems, where he was responsible for providing

frontline technical support, installation and training for a range of high-end surveying solutions.
