

# 3D Laser Mapping Partner Brazilian Surveying Specialist

3D Laser Mapping has appointed CPE Tecnologia to act as a reseller of SiteMonitor the specialist mine safety monitoring system. Founded in 1974, CPE is active in the leasing and sale of surveying equipment in Brazil and offers experience and expertise for the country's mining industry.

"The addition of SiteMonitor to our product portfolio will further enhance our position as the leading provider of surveying solutions in Brazil," commented Rogerio Herschel, Director of CPE Tecnologia. "Already proven within the mining community we are looking forward to exploring it's operation in other arenas including environmental applications and the construction market."

SiteMonitor is a safety monitoring system that automatically detects tiny movements in slopes and walls in open pit mines and other environments.

Using advanced laser scanning technology, the modular SiteMonitor 3 system offers extensive user-defined alarm options with remote monitoring over the Internet and automated warning e-mails. SiteMonitor 3 can be used with virtually any terrestrial laser scanner giving flexibility in the range, rate and accuracy of scan measurements. It has been designed as a completely flexible laser scanning system that includes configurable software modules to meet individual user's requirements, plus hardware accessories and a comprehensive service package including commissioning, training and remote support, making it a complete turn key solution.
