

AccuTerra GPS Maps on Lowrance Endura

A new line of handheld GPS devices from Lowrance will ship pre-loaded with Intermap's AccuTerra GPS starter maps. Select devices will ship with full AccuTerra premium content, including high-resolution topographic maps, extensive outdoor trail networks, land management maps, and extensive points of interest for outdoor recreation.

AccuTerra GPS maps will provide Lowrance GPS products with coverage of the US and expanded detailed map content for Western Europe. AccuTerra Europe is derived from the Company's NEXTMap Europe dataset - the most accurate and uniform digital elevation mapping data for Western Europe.

"The Endura handheld GPS line is the product premiere that outdoor enthusiasts have been waiting for," said Jens-Thomas Pietralla, president and CEO of Navico. "With detailed on-board mapping, tremendous expansion capabilities and access to community content, the Endura line is equally suited for hiking, mountain biking, hunting, backpacking and Geocaching, as well as cycling, snowmobiling, off-roading, paddlesports and skiing."

AccuTerra GPS maps are available in multiple variations to meet a wide variety of customer needs, including detailed shaded relief, contours, hydrology layers and land cover classifications.
