

AdVance RTK Precise Positioning

NovAtel Inc. (Canada) has launched its new Real Time Kinematic (RTK) precise positioning solution – AdVance RTK. NovAtel’s GNSS OEMV-2 and OEMV-3 receivers will now be available with the new AdVance RTK as part of the Version 3.100 firmware release.

AdVance RTK delivers significant performance enhancements, including more reliable ambiguity solutions and faster narrow lane convergence on short, medium and long baselines. Time to ambiguity resolution on baselines up to 20 kilometres is virtually instantaneous. As a result, AdVance RTK enables users to work more reliably and efficiently in a wider range of conditions.
