

Aerial Photography in Classrooms

Wildgoose has developed two new products to support and promote the use of aerial photography in the classroom. A Local Area Explorers' Kit provides everything needed to conduct local area studies while the Using Our School Aeroimage Deskmats pack is designed to maximise the use of Wildgoose Our School Aeroimage Deskmats. Aeroimage Deskmats are available for anywhere in England and Wales plus selected areas in Scotland.

The Local Area Explorers' Kit contains 10 A4 aerial photographs centred on the school or other location of interest. Ordnance Survey mapping of the same locality, coupled with

worksheets, 20 plus suggested activities and topics for discussion make this the perfect aid to local area studies.

Wildgoose is the largest supplier of aerial photography products to the UK education market. Designed to support teaching and promote learning at all stages of education the Wildgoose aerial photography collection features a unique range of innovative playmats, photopacks, posters, books and games plus digital image files for use on computers. With access to most up-to-date and detailed aerial photography from Bluesky, Wildgoose can create bespoke products centred on a specific location or feature.

Wildgoose has been providing resources for education for over 12 years and has grown into one of the UK's leading publishers of geographical teaching aids. Wildgoose is also a member of the British Educational Suppliers Association. As a division of Bluesky International, Wildgoose has access to the GeoPerspectives national archive of high-resolution aerial photography.
