AirPhotoUSA Selects INPHO's Software Line

AirPhotoUSA (AZ, USA) has recently purchased INPHO's digital photogrammetric software suite consisting of MATCH-AT (automatic aerial triangulation), OrthoMaster (orthorectification), OrthoVista (orthomosaicking), MATCH-T (automatic DTM generation), DTMaster (DTM editing) and SCOP++ (DTM management).

An in depth evaluation was performed by AirPhotoUSA's consultant, Christian Schumann-Curtis, owner of Blue Sky Solutions, LLC. The evaluation consisted of extensive testing of data produced and provided to AirPhotoUSA by six of the largest 'off-the-shelf' photogrammetric softcopy software companies. The final results proved that INPHO's software produced the most accurate results with the least human effort.

INPHO's high-end photogrammetric software will improve the overall accuracy of AirPhotoUSA's PhotoMapper products, and assure that AirPhotoUSA continues to provide the fastest acquisition to final product schedule.
