ALTA Photogrammetry Suite (APS) Version 7.1

Groupe Alta (Canada) is pleased to announce the release of version 7.1 of its professional Alta Photogrammetry Suite (APS). This software has been re-branded from its formally known DVP-GS since version 7.0.

This updated version offers new and improved functionality that increases productivity. Key features in this update include:

- On-the-fly contour and TIN using features within the view;

- Export to .asp (an XML based orientation file format) for compatibility with our ALTAVU free desktop viewer;

- Enhancement of multiple filter applications including better control for color balancing and other filters in Orthomosaics;

- Modifications for 2D snapping;

- Viewing of relatively orientated stereo models (does not require absolute orientation before using);

- More functions incorporated to our JavaScript macro programming engine and keyboard custom keys.

APS can function in a stand-alone mode, but also continues to include plugins for MicroStation (SE, J, 8), ArcGIS (9.2), and for AutoCAD (2000-2007). Due to Groupe Alta's evolving R&D efforts, please take note that the Version 7.2 update will be available in October that will include new features and enhancements. Users with current maintenance contracts will automatically receive this update.
