

# ArcGIS Demo for GeoWeb

ESRI is demonstrating ArcGIS, at the GeoWeb 2009 conference in Vancouver (Canada), until 31st July. The GeoWeb makes geographic knowledge more available to people who don't use geospatial technology on a daily basis but can benefit from it. ArcGIS, through the GeoWeb, allows everyone to leverage the billions of dollars already invested by governments and private organizations in developing basemaps, thematic datasets, and imagery.

With ArcGIS, creators of geographic knowledge can maintain control over their authoritative data.

The ArcGIS platform for the GeoWeb will be featured in the following sessions at the GeoWeb 2009 conference:

- Wednesday, 29th July: Geospatial Registries, Catalogs, and Search - Are We There Yet? -Satish Sankaran, Esri; Integrating Canadian Base Data for Use on the GeoWeb-Gordon Plunkett, ESRI Canada
- Thursday, 30th July: Delivering GIS to Everyone Using ArcGIS Explorer and ArcGIS Online - Bern Szukalski, ESRI; Future Directions in 3D Modeling and Visualization in Geographic Information Systems - John Sharrard, ESRI
