

Availability of Creator Terrain Studio v1.2

announced the availability of Creator Terrain Studio v1.2. Creator Terrain Studio delivers a unique set of 3D scene creation, geometry/texture creation tools and workflow management focused on the production of complex, large-area realtime 3D terrain databases.

Creator Terrain Studio v1.2 supports the import of an increased number of vector formats as well as new capabilities for viewing and editing this data. Users will also benefit from the import of MetaFlight that enables the distribution and sharing of terrain production tasks for increased productivity. This release delivers more intuitive access and information about terrain production workflows that provide users with added control over the database design translating into increased performance and reduced database production times.

Creator Terrain Studio v1.2 is available and shipping for Microsoft Windows XP Professional and 2000 Professional users.
