

# Berlin Activates Viewing Function for Real Estate Cadastre LIKA

The Berlin Senate Administration for City Development (SenStadt) (Germany) has activated its new viewing function for real estate cadastre in the Internet. With it, registered users can choose and immediately acquire the extracts from the official real estate register with owner details that are relevant for them.

This new service for geodata integrates the Automated Real Estate Map (ALK) as well as the Automated Real Estate Register (ALB) of the Federal State of Berlin, provides them on top of powerful Internet technology from AED-SICAD and automatically carries through the pricing and accounting functions by means of the e-commerce component of AED-SICAD business partner grit. Therefore, for example, real estate agents and evaluators can now include the cadastre data into their work processes with minimal effort.

The application is in German and entered via the portal Berlin.de or the following link:
