

Blue Marble Invites Software Testing

Blue Marble Geographics announces the release of a Beta Version of GeoTranslate 5.1 with Spatial Connect along with GeoTransform 6.1. GeoTranslate and GeoTransform are incorporated into Blue Marble's GeoCore SDK, a geospatial data translation developer toolkit that supports coordinate, geometry, vector, CAD, raster and LiDAR data. Blue Marble's geospatial data manipulation and conversion solutions are used worldwide by thousands of GIS analysts.

Blue Marble is looking for user participation in the GeoTranslate 5.1 Beta test with Spatial Connect along with the GeoTransform 6.1 Beta for raster data. This testing program will give users a chance to evaluate and test the new spatial database connectivity functionality at no cost. Your feedback will also help to identify interface use issues and enhancement requests that we can integrate into new versions of the developer tool.

If you are interested in participating in this beta testing period please [sign up](#).

Blue Marble Geographics of Gardiner, Maine is a leading developer and provider of geographic software products that provide sensible solutions for users and developers of geographic data.
