Boundless Exchange Now Available as Managed Offering in the Cloud

Boundless, a leader in open and scalable GIS, has announced that its flagship product Boundless Exchange, is now available as a managed service. Boundless Exchange is a highly-configurable geospatial content management system designed to facilitate the cataloging, discovery, and publishing of location-oriented content. This next generation of Exchange represents the fastest way to enable enterprise-class publishing power with a lower total cost of ownership. The latest release also offers upgraded search experience, robust styling, improved support for proprietary and open web services and a new handheld mobile field collection capability via Boundless Anywhere.

"If your organisation is challenged with a limited infrastructure, or is lacking resources to implement and maintain a GIS portal in the cloud, Boundless managed services are a great way to begin your geospatial effort," said Anthony Calamito, Chief Geospatial Officer at Boundless. "With Boundless managing your environment, your organisation can focus on the cost savings and performance efficiencies that come with an elastic GIS portal."

Open Platform for Collaboration

Boundless Exchange is the geospatial content management system for the discovery, sharing, and publication of location-oriented content. Its user interface enables non-developers to easily facilitate collaboration across the organisation using a powerful, web-enabled versioning engine featuring connected or offline editing and basemaps from leading resource providers.

Key advantages include:

- **Available as a managed offering:** Get immediate access to, and drive value with, the full feature set of Boundless Exchange. Leverage modern cloud IT infrastructures, including lower operating costs, access to the latest hardware and software environments, simplified maintenance and on-demand elastic compute resources – all managed by Boundless.
- **Expanded reach with mobile capabilities:** Exchange can now be extended into the field through the use of Boundless Anywhere. Enable real-time collaboration with field workers, perform ground-truthing, add your own photos to map features, or collect and edit data offline.
- **Improved layer styling:** Take advantage of a modern powerful styling engine to create beautiful maps and layers, all within your control and without the need to write code.
- **Improved search:** Improved search functionality with new filters to designate authoritative content, ensures that you will find exactly what you are looking for.

Boundless solutions are built on open GIS technology and APIs that generate actionable location intelligence across third-party apps, content services and plugins for enterprise applications.
