

# BroadbandStat Puts Maps Online

The states of Michigan, Minnesota, Nevada, and South Carolina are now providing easy-to-use maps that show in detail each state's broadband coverage. The interactive, online maps are made possible by BroadbandStat, an application based on ESRI GIS technology, and will help the states plan and improve high-speed Internet access for their residents and businesses

The BroadbandStat maps were funded by grants from the U.S. Department of Commerce's National Telecommunications and Information Administration (NTIA) and contribute to the comprehensive national broadband map that NTIA is required by the American Recovery and Reinvestment Act to create and make publicly available by February 2011. Interactive tools include the ability to identify the population density and unserved households in a selected area, link to news about broadband-related projects, and create reports and charts.
