

# CarbonTools PRO

The Carbon Project (MA, USA) has announced that its third generation of the open-geospatial .NET toolkit CarbonTools, CarbonTools PRO, will include support for an extensive range of new location content and services including Google Earth KML, ESRI Shapefiles, MapInfo and Autodesk formats as well as support to services such as Open Geospatial Consortium, Inc. (OGC) WCS and the Open Source Geospatial Foundation's (OSGeo) MapGuide.

CarbonTools PRO provides software development tools for bringing location-based content into Microsoft's .NET 2.0 Framework. In addition, CarbonTools PRO leverages ground breaking new content search and sharing capabilities. CarbonTools PRO Beta will be released in July 2006.
