

Carlson Software Introduces New Data Collectors

Carlson Software (KY, USA) has introduced their all new Carlson Surveyor+ data collector. The all new Carlson Surveyor+ and Carlson Surveyor are completely ruggedized, with an IP67 water and dust resistant Ingress rating. Both versions of the handheld computer are encased in magnesium housing. In addition to more RAM and increased operating speed than the Surveyor, the Surveyor+ has the option to add an extra battery to increase operating time.

The Carlson Surveyor line offers up to 1 gigabyte of memory with the option to expand. They are light and easy to grip, being thinner front to back than other data collectors when resting on a table top. The computer runs on Windows Mobile 6 and Carlson SurvCE 2.0, the powerful data collection software used around the world, can be included.

The Surveyors can be used for surveying, stake out, construction layout and more. Two styles of USB connectors are located on top. The 3.5-inch diagonal backlit screen offers colour QVGA resolution of 240x320 pixels.

Orders are being taken now for the Carlson Surveyor, which will be available for delivery beginning in late September 2008.
