

Carlson Software Releases Carlson SurvCADD 2006

Carlson Software (UK) has announced the release of Carlson SurvCADD 2006. Carlson SurvCADD 2006 consists of modules for surveying, civil engineering, construction and mining, and runs inside AutoCAD 2006, the world's leading customisable and extendable CAD software for 2D drafting and 3D design.

Although Carlson SurvCADD 2006 is compatible with earlier releases of AutoCAD, this new release enables customers to take advantage of some of the newer capabilities found only in AutoCAD 2006 including the new drafting and annotation tools and the new heads-up design interface. The end result is that AutoCAD users who are staying current or are on Autodesk Subscription can utilise Carlson SurvCADD 2006 immediately and maximise their productivity.
