# CGO: a New Post-processing Software Solution

CHC Geomatics Office (CGO) is a software solution dedicated to post processing of static and kinematic GNSS raw data. The solution supports GPS, GLONASS and BeiDou data in various raw data formats and is compatible with major equipment brands allowing a seamless integration with an existing pool of equipment.

George Zhao, CEO of CHC says that the CGO software suite reinforces the company's commitment to provide full GNSS solutions to the customers including post-processing applications.

A 90-day fully functional demonstration license is available to enable users to evaluate the CGO software's features before purchasing.
