

CHC Navigation Introduces New GNSS RTK Solution

CHC Navigation has announced the immediate availability of its new i50 GNSS receiver, an all-in-one GNSS RTK solution. Bundled with CHC HCE320 Android controller and CHC LandStar 7 field data collection software, the i50 GNSS receiver provides an effective solution for topographic and construction positioning tasks in land surveying, small and medium-size construction projects and precision GIS data collection.

The i50 GNSS is designed to match the demand of cost-conscious yet demanding professionals searching for one all-in-one GNSS RTK survey solution, said Hans Huang, product manager of GNSS Solutions for [CHC Navigation](#). By integrating field proven GNSS positioning and communication technologies in a compact and rugged unit, land surveyors will experience excellent work flexibility in their daily field work with CHC i50, he

added.
