

Chronos Partnership Septentrio

Chronos Technology (United Kingdom) and Septentrio (Belgium) are working together to bring Septentrio's products into the OEM and professional precision GNSS receiver markets in the UK and Ireland.

Septentrio's Sales & Business Development Manager, Jan Van Hees, said "Septentrio is very pleased to be working with Chronos who will be offering our entire range of GPS, Galileo and Glonass Receivers. We are counting on Chronos' system integration and technical solution expertise to enable customers to realise their GNSS based solutions. Additionally Chronos can provide training, installation and product support value-add services."

Charles Curry, Managing Director of Chronos said "We are extending our GNSS range with the Septentrio products to supply the geodetic markets." He added "Chronos has vast experience of supply and install of GPS timing products into the telecom sector and GPS components into the GPS manufacturing and testing markets. This new relationship enables us to expand our GNSS market footprint to include many other application areas besides the telecommunications timing industry and we look forward to bringing our value add services and quality of service solutions to the precision GNSS market."

Chronos Technology Limited supplies RF and GPS components for equipment designers whose products are frequently used in communications and military applications. Chronos is also a specialist provider and system integrator of technical solutions for synchronisation, time of day and remote monitoring applications.
