

Commercial UAV Expo Opens Doors in Las Vegas

The Commercial UAV Expo opened on Monday, 5 October, at Caesars Palace in Las Vegas, USA, featuring 120 exhibitors. Over 1,500 attendees are expected, including many large enterprise technology leaders from key growth sectors for UAS integration including surveying & mapping, civil infrastructure, mining, construction, process, power & utilities, precision agriculture, law enforcement, security and search & rescue (SAR). The event runs until Wednesday 7 October.

Each of the seven industries covered by Commercial UAV Expo has a dedicated track. The programme also has plenary sessions that address important issues that transcend industry, like systems selection and integration, applications, workflows, data management, insurance, safety, and

legal and regulatory considerations. Keynotes will be delivered by [Dyan Gibbens](#), CEO and founder of Trumbull Unmanned, whose presentation is entitled "UAVs: A vision for Global Asset Owners," and [Dr. Patrick Meier](#), founder of the Humanitarian UAV Network, whose presentation is "Humanitarian in the Sky: Drones for Disaster Response".

The event is a one-stop shop for large-enterprise UAV professionals, said Lisa Murray, Commercial UAV Expo director. Attendees will access the education, products and connections they need to help them navigate this rapidly advancing technology. What they learn at this conference could, quite possibly, change the way they do business.
