

ComNav Debutes at FIG Congress

From 17 to 19 June, as the first high accuracy GNSS OEM board manufacturer in China, ComNav Technology attended the XXV FIG (International Federation of Surveyors) congress and exhibition in Kuala Lumpur, Malaysia. The exhibition showcased the latest surveying and spatial products and services.

During the FIG congress, ComNav exhibited the K series GNSS OEM boards as well as the GNSS receivers. ComNav reported their booth was always crowded by lots of surveying and land professionals from across the globe, who were interested in and trying to get more information about the products.

Among those products exhibited during the congress, ComNav's new generation product, T300 GNSS receiver was the most popular one which attracted lots of visitors. T300 GNSS receiver is a very suitable RTK receiver for land survey, which combines lots of field proved advantages together, and it can track all the working GNSS constellations. Its ultra-small size, unimaginable light, hot-swappable batteries, simple internal structure and clean engineering took the fancy of the public.

As a provider of high accuracy GNSS solutions, ComNav intends to attend FIG events continuously to bring its reliable and competitive GNSS solutions to worldwide surveyors.
