

# Contex TOUCAN G25 Colour Scanner

Contex (VA, USA) has released the TOUCAN G25 colour scanner which combines the features of its predecessors into a single compact large document scanner which can scan documents up to 25" wide. It retains the Contex™ 48-bit CCD Technology for 32,000 pixel image capture. Additional features include, scan accuracy of 0.1%+/- 1 pixel, all-wheel drive for smoothly handling of large originals and flexible connectivity with both FireWire and USB 2.0 for ease of installation and use. The TOUCAN captures colour at 48 bit colour data capture and 16-bit gray tones for maximum image precision. Using an all-digital camera with advanced point-of-origin image capture and on-board digital conversion ensures minimum noise and an extended dynamic range. All processing is embedded in the hardware enabling the user to perform image enhancement without the typical slow processing speeds of a PC when Post Scan Processing.
