

# Danish Aerial Mapping Company

As part of Fugro's strategy to expand its Aerial Mapping services business in Europe, a new company - Fugro Aerial Mapping A/S - has been established in Denmark to provide Aerial Imagery and LiDAR services in Scandinavia.

Fugro acquired earlier this summer three survey aircraft, various sensors and other related equipment which were formerly owned by the company Scankort A/S and which will be operated in future by the new Fugro company in Denmark.
