

# DAT/EM Hires New Software Engineer

DAT/EM Systems International (AK, USA) announces the addition of Julie Perilla to its software engineering team.

She worked as a software engineer for two different CAD software companies. Most of her programming knowledge is in C and C++, but she has had some experience programming in Java and Visual Basic as well.

Julie graduated from Cedar Crest College with a Bachelor's of Science in Computer Science and a minor in Mathematics. She worked for two years at AceCad Software where she helped develop a new CAD Drawing Production System for the plotting of drawings from 3D models. She then moved over to Bentley Systems, the maker of MicroStation, and worked on their Triforma product, which is used for making models and drawings for building construction. Her focus was on their Structural Steel Product.
