

DeLorme XMap OpenSpace Database Integration Kit

DeLorme (ME, USA) has released the XMap OpenSpace Database Integration Kit, which allows automatically updating geographic data managed within the OpenSpace database by means of Microsoft SQL Server. The Integration Kit is for use with the company's XMap/GIS Editor and .NET enabled. It provides a DLL library to link collected geodata directly to a data layer within XMap/GIS Editor. This offers increased productivity in any type of operation where geodata is collected in the field. Constantly changing data occur with, for instance, aerial spraying, broadband cellular coverage, demographic statistics, and readings from remote valves and sensors.
