

Digital Map of Denmark

The full digital map of Denmark is available for commercial use. Denmark is the seventh Western European country for which the mapmaker has developed a navigation map. The map contains 140,000 kilometers of roads and almost 7,000 cities and villages.

AND is accelerating its efforts to fully map Western Europe, following an agreement made earlier this year with a large American online company, for the use of AND's maps of Western Europe.
