

# DroneHive Shares Top 10 Reasons to Use a Drone Services Company

Every day DroneHive, a provider of expert services for aerial data collection, sees first-hand how corporations are integrating aerial data into their business strategies. The company is also acutely aware of the many ways corporations can get into trouble when they try to navigate the complexities of drones on their own. To help guide corporations in this new area, DroneHive has unveiled a document that lists the [top 10 reasons for corporations to use a drone services company for aerial data collection](#).

The guidance document covers everything from indemnification and safety, to various cost savings and the ability to use diverse drones based on the specific task at hand. UAV services companies also help to ensure a corporation is collecting accurate and unbiased aerial data, enabling the corporation to make better and more efficient operational

decisions.

## Network of drone consultants and operators

[DroneHive](#) has a US nationwide network of 500 professional drone consultants and operators to help corporations integrate aerial data collection into their business models. By using DroneHive to develop and manage aerial data collection, corporations don't need to waste time trying to understand complex drone rules, regulations and safety. The company has a perfect safety record after thousands of flights and can deploy drone operators within days.

Aerial data collection is especially useful in construction, energy, security, insurance, civil engineering, agriculture, real estate and property management – all industries that regularly do inspection, surveillance or other aerial data collection. DroneHive has been working with a major global technology company, a national industrial equipment firm, the world's second largest solar company and even a well-known brewery.

Drones are here to stay and corporations are rapidly increasing the number of flights for aerial data collection in 2018, said Paul Huish, CEO of DroneHive. The problem is that corporations are often like a fish out of water in this new realm and they put their companies at great risk. DroneHive takes away this risk, enables these corporations to breathe more easily and make better and more strategic business decisions than ever before.

## More on the Top Ten Guidance Document

The guidance document that DroneHive wrote covers ten of the major benefits of using professionals vs. cobbling together a team in-house. The list includes:

1. Protection from potential lawsuits and litigation
2. Better safety risk management
3. Navigating complex and costly aviation insurance
4. Expert and vetted operators
5. Cost savings
6. Immediate deployment
7. The best drone for the task
8. Operators available nationwide
9. Greater flexibility
10. Objective data collection

Working with DroneHive is straight-forward. The company handles all of the details, from initial consultation on a corporation's specific needs to implementation – using drones provided by DroneHive or the corporation itself. Because DroneHive has such a large nationwide network of experts in the United States, they can rapidly deploy local operators, usually within a few days.
