DTS and Geocom to Deliver GIS Software Solutions

Data Transfer Solutions (DTS), specialised in asset management, geographic information systems and transportation planning services and solutions has entered a strategic partnership agreement to become Geocom's official reseller for GEONIS software in the USA.

DTS, headquartered in Orlando, Florida, has been developing ArcGIS-based solutions in the area of asset management related to the transportation, utilities, wildfire and environmental markets for decades. With Geocom's GEONIS Street Network Manager and Geocom's products for logistics, DTS can extend its product offering to the transportation sector. In addition, DTS is expanding its GIS offering and becoming a GEONIS reseller for infrastructure management solutions from Geocom, building on its Lidar and GIS utilities experience.

DTS is excited about its partnership with Geocom and expanding its capabilities with these products, said Allen Ibaugh, CEO. DTS and Geocom will combine their strengths and abilities to offer incredible GIS software innovation throughout the United States. The DTS-Geocom partnership provides transportation and utility industries with the entire life cycle of a GIS system: from business and process analysis to system requirements and IT architecture to operation, Ibaugh continued.
