

# Erdas and Ordina Partnership

Erdas (GA, USA) and Ordina (The Netherlands) have initiated a partnership to develop Geo-Information and Communication Technology (Geo-ICT) solutions based on Service Oriented Architecture (SOA).

Geo-ICT integrates geospatial solutions with conventional ICT environments, making it possible to relate people and objects with a specific location or shape, creating additional business value. For example, with Geo-ICT, online maps incorporating real-time data may be used to track the spread of vaccinated children in the Netherlands, or a transport fleet and their freight.
