

# ESRI Announces StreetMap Pro Now Available

ESRI (CA, USA) has announced that StreetMap Pro is now available. This new dataset provides high-quality display of commercial-level street data. StreetMap Pro is optimised for ArcGIS Desktop (ArcView, ArcEditor, and ArcInfo).

StreetMap Pro was created as part of the ESRI Data & Maps product family to support customer requests for enhanced street datasets to use with the ArcGIS StreetMap routing toolbar. StreetMap Pro includes the Tele Atlas Dynamap/Transportation United States and Canada street dataset Version 5.2, July 2003, as well as updated cartographic layers from Tele Atlas Dynamap/Transportation Version 7.0, January 2005.

StreetMap Pro will be updated every two years, beginning in 2007. It contains more complete and current address information than StreetMap USA and is also positionally more accurate. One-way and turn restriction information ensures nationwide routing and driving directions are generated more accurately.

Use StreetMap Pro to geocode addresses and generate routes and driving directions, as a cartographic display, as a backdrop for plotting customer locations or as a basemap.

StreetMap Pro is delivered on a single DVD. It includes complete metadata files and is configured to work with the ArcGIS StreetMap toolbar included with ArcGIS Desktop and the optional ArcGIS Network Analyst extension.
