

ESRI-based Geospatial Curricula

ESRI (CA, USA) and two of its partners, Digital Quest, Inc. (DQI) (MS, USA) and Berkeley Geo-Research Group (CA, USA) will combine efforts to expand the educational programs for the quickly growing geospatial workforce. DQI and Berkeley Geo-Research Group (BGRG) have created a series of geospatial workforce curricula under the general banner SPACESTARS. The educational packages are composed of professional GIS and remote sensing applications, targeted data and tailored lessons and classroom support materials. ESRI software, including ArcView, Spatial Analyst and 3D Analyst, and relevant ESRI Press books provide the GIS foundation.
