

EVC Creates 1:50K CADRG Background Map of Middle East

East View Cartographic (EVC) has created a 1:50,000 scale background map in CADRG format over the whole of the Middle East for Geo Tech Consulting â€” TURKEY.

According to EVC geospatial director, Nick Nazarenko â€œEast View is one of the few commercial companies to support the CADRG and ADRG formats, the primary map background file formats used in most automated command and control systems. We can use our 15 terabytes of in-stock raster maps to create a seamless map over almost any area of the world.â€

CADRG is a compressed version of ADRG (ARC Digitized Raster Graphics). Both formats support various digital moving map systems, mission planning, and C3I theater battle management. CADRG is a Raster Product Format and National Imagery Transmission Format Standard (NITFS)-compliant. EVC also creates vector data that is compliant with all existing military standards including VMAP2, FFD and UVMAP.
