

# Facility Management System

SuperGeo Technologies will shortly release its Facility Management System. Users can manage, create and navigate diverse facility information via the GIS platform promptly. Facility Management System enables users to browse, edit and manage facility information through the Internet anywhere and anytime. In co-operation with GIS technologies, this system assists users in integrating, managing and analysing the facilities in a certain region.

The map service in Facility Management System supports to display the cached images, vector layers, and Web maps, enabling field surveyors to rapidly key-in the related data and to efficiently manage the rich information with ease. In consequence, the facility management can be effectively and structurally completed.

Facility Management System is suitable for scenic area administration in each government organisation and contains the front-end and back-end platforms. It allows the administrators to set the user permissions in using the functions; thus, the system administration can be customised to meet the various needs in an efficient way.
