

First Pix4D User Workshop at UAV-g 2013

Pix4D has announced its first user workshop. It will be held on 3 September 2013, the day before the UAV-g 2013 conference starts at Rostock University in Rostock, Germany. The goal of the workshop is to provide attendees with in-depth knowledge on the Pix4uav software as well as all elements that are important to make their projects successful.

These elements are optimally adapted hardware, cameras, flight plan, processing tips and tricks as well as a more general understanding on the outline of automatic photogrammetry software. The workshop addresses current and future users of Pix4uav software who are looking to obtain best results with minimal processing time investment. The programme will also include hands-on experience and project examples of various industries.

As attendance capacity is limited, Pix4D recommends to sign up soon to secure your spot. If you would like Pix4D to address a specific topic, you are invited to let them know and they will do their best to integrate this into the final programme.

The workshop is not only a good occasion to meet the Pix4D team in person and exchange your experience with them but also a nice warm-up for the exciting UAV-g Conference starting the next day.
